SPECIAL DISCOUNT 20% from these prices

Growers of Quality Fruit and Ornamental Trees Evergreens, Shrubbery, Etc.

A Personal Message

In presenting our catalog, we wish to emphasize the fact that it is hardly possible for us to express in words our appreciation to our many customers, for the business we have enjoyed during the past years in which we have been engaged in the nursery business.

We have tried to construct our catalog in a plain straightforward way, so that all can understand it. We have tried to list the varieties that will prove best in this section of the country, giving a brief description of each. In some cases we have added to our list, especially in our ornamentals.

Your attention is called to the reduced prices in this catalog which you will find are in reach of all. We have a good supply of healthy, vigorous and wellrooted trees and plants. And we are soliciting your valued orders, confident that you will be pleased with our stock, and join our many satisfied customers.

We thank you in advance for any business that you may place with us, and assure you it will at all times receive our best possible attention.

GEO. E. STEIN & SON.

Our Home and Office

HOW TO REACH THE NURSERIES

Our Nursery and office are located one-half mile west of East Prospect on the road leading from East Prospect to Wrightsville.

Our Branch Nursery is located along the Lincoln Highway between York and Hellam, at Yorkshire.

If you are not acquainted with the location of our Nurseries, a little study of the above map will help you to get to us with very little, if any, trouble.

Visitors Welcome. But no business will be transacted on Sunday.

INSTRUCTIONS TO PURCHASERS

Orders. Orders should be sent in just as soon as possible after receiving catalog. By placing orders early you are more certain of getting the varieties wanted, as late in the season we are often sold out of some of the varieties. If ordered early we can reserve the stock until you want it shipped.

Shipping. We have the Pennsylvania Railroad and the York Trolley system, and can ship in any direction with the probability of prompt arrival at destination. All shipments travel at the cost and risk of the purchaser.

Truck Deliveries. Truck load orders will be delivered

Truck Deliveries. Truck load orders will be delivered free, reasonable distances; long hauls and smaller orders delivered by special arrangement. We are well equipped

to give good truck service.

Guarantee. We guarantee all stock to be strictly first class and true to name and will upon proper proof refund the purchase price, or replace any stock which proves otherwise. It is understood and agreed that we will not be held responsible for any greater sum than the cost of the stock, should any prove untrue. We strive to avoid mistakes and believe that we are as exact as any in the business.

believe that we are as exact as any in the business.

Our nurseries are inspected every year and every shipment will be accompanied by a Certificate of the

State Inspector.

Replacements. We guarantee all stock we sell to be strictly first-class and TRUE TO NAME, dug and packed properly for shipment; we do not charge a price for a tree that, should it die, we could replace it and then still make a profit. Stock often perishes when it is not properly planted and cultivated; also the severe cold and heavy storms of Winter and droughts of Spring and Summer, which are liable to occur, will sometimes cause the best of stock to perish, which is no fault of ours.

It is impossible for us to guarantee trees and plants to live, as this altogether depends on weather conditions and how stock is planted and cared for after planting. The conditions which prevail after stock leaves our hands are such that it is just as impractical for a Nurseryman to guarantee a tree or plant to live as it would be for your best neighbor to sell you a horse or other live stock and guarantee it to live. We can only guarantee to send you good stock up to grade represented, full of life and true to name.

Terms Cash, except when expressly agreed otherwise. Substitution. When sold out of a variety of trees or plants we frankly say so, and when you allow us to substitute we will send a variety similar to the one ordered, as good or better; as we know the many varieties, our substitution, if any, will be of advantage. Late in the season we are sometimes sold out of some varieties of stock; thus when sending your order it is to your advantage to say whether we may substitute or not, that we may get the order off promptly, before the season is too far advanced for successful planting. If you do not wish us to exercise this right, please mark your order sheet plainly NO SUBSTITUTION.

SUMMER VARIETIES

YELLOW TRANSPARENT. Earliest and best; white, tender, juicy, sprightly sub-acid; grows upright; bears when young, making good filler.
EARLY HARVEST. Medium; pale yellow; tender, juicy.

EARLY HARVEST. Medium; pale yellow; tender, juicy. SUMMER RAMBO. Very large; greenish red, striped; tender, juicy; tree strong grower.

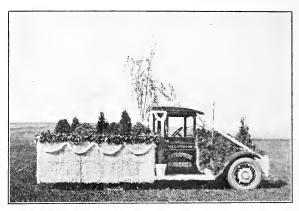

tender, juicy; tree strong grower.

RED ASTRACHAN. Large, nearly covered with deep crimson, juicy, rich, acid, beautiful. Tree a vigorous grower. A good bearer.

grower. A good bearer.
EARLY STRAWBERRY. Tender, juicy, productive.
WATERMELON. Large, pale yellow; sweet, tender and juicy. Tree a compact grower and abudant bearer.

FALL VARIETIES

FALL PIPPIN. Large, yellow, rich, aromatic.
GRAVENSTEIN. Large striped, fine quality, one of the best fall sorts.

Our Nursery Float as Seen in the Sesqui Parade

MAIDEN BLUSH. One of the most beautiful; pale lemon with crimson cheek; flesh white, tender and crisp. WEALTHY. Fall. Almost solid red. Flesh white, tender, crisp, juicy, fine grained. A good keeper.

McINTOSH. Medium size, nearly covered with a bright red, flesh yellowish, tender, juicy, sub-acid.

SMOKEHOUSE. Fruit medium to large, uniform size

and shape. Color yellow or greenish mottled with rather dark red, sometimes deepening to a bright red.

WINTER VARIETIES

GRIMES GOLDEN. Very large, skin golden yellow; flesh tender and crisp. A very good fall apple. September to January. Grown in all sections of the country.

STAYMAN WINESAP. A profitable sort to grow for market, and the best for home use. Large in size, fine appearance, good flavor, juicy and crisp, color red. A great success.

RÔME BEAUTY. Large; roundish, slightly conical, with bright red on a pale yellow ground. A profitable

variety.

DELICIOUS. Keeps well, color red, fine grained; and quite juicy, quality very good. A good apple for either home use or market.

YORK IMPERIAL. A medium to large winter apple with yellow skin shaded red; firm, juicy, sub-acid. An excellent canning and shipping apple.

JONATHAN. Most beautiful of all apples. Fruit medium to large, roundish, yellow nearly covered with red, fine grained, tender and finely flavored.

PARAGON. Winter. A round apple, of extra-large size;

skin smooth, yellowish, covered with deep red, the general effect being dark red; flesh tender, tinged with yellow, crisp, sub-acid aromatic, of excellent quality in every way. Tree is vigorous and healthy.

WINTER BANANA. Size large, golden yellow and beautifully shaped with bright crimson red. Flesh lemon yellow, fine grained, sub-acid, rich, aromatic flavor. Season November to January.

PARADISE WINTER SWEET. Large: creamy white, rosy cheeked. One of the best sweet winter varieties. RHODE ISLAND GREENING. Large, greenish yellow, tender, juicy, rich, acid. The old reliable Winter cook-

ing apple, and also good for dessert.

FALLAWATER (sometimes called Pound Apple). Large;

yellowish green.

MANN. A round, attractive, greenish yellow apple; flesh fine grained, juicy, firm, good quality. October to April. HUBBARDSTON. Large, red, striped, tender, juicy. STARK. Large, striped, mild, sub-acid, good. Valuable

as a keeper. January to May. ALDWIN. Large, bright red, crisp, juicy, rich.

BALDWIN. Large, bright red, crisp, juccy, RAMBO. Medium, red and yellow. Mild flavor.

SENATOR. Tree vigorous, upright; fruit uniform in size and shape, fine grained, crisp, tender, very good. Color

bright red, striped with carmine.

A derivation from McIntosh, adding dis-CORTLAND. tinct perfections to that already very perfect apple. tree: hardy, thrifty, early producing and long lived. The fruits: abundant, large, round.

CRAB APPLES

HYSLOP. Large; deep crimson; one of the most beau-

tiful; very popular. TRANSCENDENT.

For many years the most popular crab apple. Fruit about an inch in diameter, yellow, with red cheek.

PEACHES

We are offering only a limited number of varieties, ones that you can depend on giving you a good crop of fruit. We do not think it worth while to propagate a large number of varieties, when a few of the best will make more money for our customers. The peach crop is quite sure if you give your trees proper attention.

PRICE OF PEACHES

HEDGE PLANTS

2 to 3 ft......

CALIFORNIA PRIVET. The most popular hedge plant on account of its beauty, adaptability, and low cost. Did you ever realize what an admirable and luxuriant privet hedge you could secure at a very small cost, and how much it would add to the value of your property? To find the exact number wanted, measure the space where it is to be planted and multiply the number of feet by two.

They should be planted 3 inches deeper than they stood in the nursery row. Set the plants 6 inches apart in the row. Dip the roots in water before planting. After plants are set, cut them down to 4 inches from the surface of the ground. This will cause a thick new growth to start and is very essential for a beautiful hedge.

Many of our Ornamental Shrubs and Evergreens make splendid Hedges, Screens and Windbreaks.

Manchester, Pa. R. D. 1 Dec. 26, 1930.

Geo. E. Stein & Son Wrightsville, Pa.

Gentlemen:

When your new catalog is ready please send me one as I will need some trees again this Spring.

The trees I received last Spring were fine and came through

the extreme dry season quite well.

I want to thank you for the courtesy shown me upon a recent visit to your nursery.

Assuring you that I can reccommend your stock to my friends for I have not seen better trees or shrubbery anywhere.

Respectfully, Chester H. Gross

Large Block of Beautiful Evergreens

EVERGREENS

Our Evergreens are compact, nicely shaped specimen plants. They will be balled and burlapped, that is, carefully dug with the proper amount of soil about the roots and wrapped in burlap. These prices include this service.

WISTERIA SINENSIS (Chinese Wisteria) Good for pergolas, porches and trellises; dense drooping clusters of pea-shaped purple-blue flowers. Each 2 to 3 ft. \$1.00
ORNAMENTAL HARDY GRASSES
EULALIA JAPONICA. Long, narrow, graceful green foliage, and when in flower the silvery grey plumes are very attractive.
EULALIA JAPONICA VARIEGATA. Very ornamental; long, narrow leaves, striped green and white.
EULALIA JAPONICA ZEBRINA. The long blades of this variety are marked with broad, yellow bands across
the leaf. Sometimes called Zebra Grass. EULALIA GRACILLIMA UNIVATTATA (Japan rush) Graceful habit, with very narrow foliage; of a bright green color, with a silvery midrib.
Strong clumps\$.35 Extra heavy clumps
HARDY PHLOX
Perennial Phloxes succeed in almost any soil enriched with manure in Spring, and in hot weather an occasional soaking of water. If the first spikes of bloom are removed as soon as over, they will produce a second supply of flowers, continuing the display until late in autumn. CHAMPS ELYSEE. Rosy purple; very effective. RIJNSTROOM. Beautiful rose pink.
THOR. Salmon-rose, with scarlet glow. W. C. EGAN. Lilac, with bright solferino eye.
BRIDESMAID. White, with large crimson center. VON LASSBURG. Pure white; immense panicle.
LA VAGUE. Lavender-pink. MRS. CHARLES DORR. A beautiful shade of lavender. R. P. STRUTHERS. Cherry-red, suffused salmon.
RHEINLANDER. Salmon-pink. MRS, JENKINS. Flowers large, pure white. Early.

ROSES

Earliest white; pale pink eye.

The list we offer is not a large one but contains the "cream" of the ones which thrive best here. Our roses are two-year field-grown, were dug in the Fall and are planted in six-inch pots. In this way they will be sure to grow, and bloom in a very short time.

Free bloomer.
MISS LINGARD.

Favorite white climber; flowers semi-double large with brilliant vellow stamper.

double, large, with brilliant yellow stamens.

SUCCESSFUL PLANTING, PRUNING AND CARE OF STOCK

The bundles should be opened immediately, the roots dipped in water, then heeled in moist ground so that the mellow earth will come in contact with the roots and thoroughly protect them from the air, having the earth tramped solid about them.

When ready to plant, take up only a few at a time, puddle the roots and do not allow them to lie exposed to the

sun or air.

The ground should be carefully prepared by deep plowing and firming down with a disc and harrow.

PLANTING

The holes for planting must be large enough to receive the roots freely, without cramping or bending them from their natural position. All broken or mutilated portions of the roots must be cut off so as to leave the ends smooth and sound. All trees should be planted two or three inches deeper than they stood in the nursery row; pack the soil very firmly about the roots by tamping with the feet or post tamper, being careful not to bark or break the roots. Leave three inches of the surface soil loose to serve as a mulch. If the ground is very dry apply one to two pails of water before this soil mulch is in place, and after the water has soaked away it can then be placed over the moist soil.

PRUNING

Many failures of newly transplanted stock are due to the lack of proper pruning. When the trees are dug in the nursery, some of the feeding roots are left in the ground, therefore, when transplanting it is necessary to restore the balance between the roots and the top by removing part of the tops.

In pruning, make a clean, sharp cut. Do not leave stub ends in removing branches. Pruning shears, knives and hand saws are the best tools to use. All tools shoud be

sharp.

FRUIT TREES. One of the most important items in the care of fruit trees is to see that they are trained right from the start. Our two-year-old and larger sizes have the heads already formed, with three to five scaffold limbs well arranged along the trunk to support the head. These trees should be cut back, leaving just the scaffold limbs shortened to the point where it is desired to have the head of the tree.

One-year trees, or whips, should be trimmed to smooth, straight stems, cutting them squarely off at the distance from the ground at which it is desired to have them branch. Usually, apples, plums, pears, and cherries are headed a little higher than peaches, which ought to be

encouraged to branch as low as possible.

SHADE TREES. With shade trees having a heavy top at least one-third of the top should be removed. Prune to avoid crowding branches. Cut out some of the small branches, shorten back the side branches, but do not cut off the leader or main stem. Try to get well developed head, strong leader and branches at wide, not close, angles. Cut off all broken roots.

SHRUBS. It is easiest to prune shrubs before they are planted. This is likewise the only time the roots can be pruned. Cut off damaged or frayed roots just above the point affected. Thin out tops of many branched shrubs, removing the old wood. Cut tops back from one-third to one-half.

EVERGREENS. At planting time evergreens seldom need pruning. If well grown like ours they are shapely and when handled with balls of soil they should grow off without trouble. However in a year or so some varieties are inclined to grow "open." Then shearing may be done with hedge tools, clipping the young growth, preferably not further than that made the previous season. This causes the inner branches to advance making a very close and compact plant, thus hiding the unsightly interior of open trees. Topping, too, may be done but please try and cut to a small branch that will again develop into a leader. Chopping the tops off flat often makes good trees resemble a sawed-off board or log. Important—Prune evergreens when they are growing—better just as the spring growth comes on and at least before it becomes hard in July.

WINTER PROTECTION FOR EVERGREENS. Evergreens during the first Winter after planting should have some form of protection. Wind and sun may cause damage on account of excessive evaporation of moisture from the foliage at a time when no moisture is being taken in through the roots. When subject to alternate freezing and thawing protect also against heaving of the soil.

Moisture evaporation may be prevented by the erection of a burlap shield as a windbreak to ward off strong drying winds. Avoid wrapping to tightly or injury to the plant will result from heating of foliage.

To prevent heaving of the soil provide a ground mulch of strawy manure, cut tobacco stems or any material (other than fresh manure) which will form a light, loose covering.

Be sure, too, that the ground is thoroughly saturated with moisture before it finally freezes up, and leave no holes near the plants for the water to collect and freeze.

SUITABLE DISTANCE FOR PLANTING

Apples-30 to 40 feet apart each way.

Standard Pears and Cherries-20 feet apart each way.

Plums, Peaches and Apricots—16 to 18 feet apart each way. Dwarf Pears and Quinces—10 to 12 feet apart each way. Grapes—rows of 10 to 16 feet apart; 7 to 10 feet in rows.

Currants and Gooseberries-4 feet apart.

way.

Raspberries and Blackberries-3 to 4 by 5 to 7 feet.

Strawberries, for field culture-1 by 3 to 3½ feet.

Strawberries, for garden culture-1 to 2 feet apart.

Asparagus, for field culture—18 to 24 inches by $3\frac{1}{2}$ to 4 feet.

Asparagus, for garden culture—18 to 24 inches apart each

NUMBER OF TREES OR PLANTS TO THE ACRE

40 feet apart each way	28
30 feet apart each way	48
20 feet apart each way	110
18 feet apart each way	135
15 feet apart each way	205
12 feet apart each way	300
10 feet apart each way	435
8 feet apart each way	6 80
6 feet apart each way 1	,210
5 feet apart each way	,745
4 feet apart each way	2,725
3 feet apart each way 4	,840

RULE—Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant, which, divided into the number of square feet in an acre (43,560), will give the number of plants or trees to the acre.
